EXPERIENCE

EaseCap Solutions GmbH, Germany

02.2009 – 02.2011

Development of a document management system for loan servicing industry

The application gives user the ability to easily access and maintain a constantly growing set of documents. The documents can be uploaded, searched, sorted, downloaded and deleted from the system using the web GUI. The access to the documents is controlled by access rights and permissions management module

(Java, ICEFaces, EJB, Hibernate, Oracle 11g)

Development of portfolio management application for loan servicing industry

The application helps the asset manager to monitor assets and develop workout strategies. Or technically speaking provides tools for loan data aggregation and analysis, ratio and cash flow calculation, reporting

(Windows client - server application. C++/ VCL, Oracle 11g)

Surf Communication Solutions, Ltd, Israel

04.2008 – 10.2008

Construction of automated test environment for a variety of Surf™ media processing boards(short term position due to my relocation to Germany)

The project I worked on was construction of automated test environment for media processing boards. My key responsibilities included development of remote control drivers for WinNT based systems, modules for test results parsing and presentation

(Java, Swing, Sockets)

LogNet Systems, Israel

2007 – 2008

J2EE application development for Billing and *Customer Self Service* solutions

The project I worked on was such a system for a mineral water company.
The application provides company customers with the ability to perform self-service online operations like billing, contracts management, order management, reports generation, etc.
(Java, Struts, EJB, JSP, JavaScript, AJAX)

In 2008 Israeli team including myself was downsized as a result of Lognet moving their development department overseas

Tadiad Computers & Information, Israel

2004 – 2007

Tadiad is an outsourcing company providing a variety of IT/Development services. Their biggest client is IBM Software Solutions.

I've worked on a number of projects in different areas from storage management to application servers. My main responsibilities were design and development of software modules. Here are the last projects I've worked on:

Build customization tool.

Provides the ability of customizing the contents of installation package. The user is able to remove any unnecessary features with all the related files from the installation package archive before the installation
(Java Swing, JDOM, Apache Ant)

Log viewer for OSGI based lightweight application server.

Web application for easy viewing/sorting/filtering of the application server log records
(Eclipse plug-ins, JSF)

Database connectivity layer for OSGI based lightweight application server.

Plug-in application for easy creation/customization of database connection
(Eclipse plug-ins, JDBC)

Web programmer as freelancer, Israel

2003 – 2004

Design and development of a websites for several young companies providing their services in a field of mechanical engineering.

I was taking care of all the necessary processes from definition of functional requirements and choosing the webhosting provider to the final release of a complete product using incremental development approach.
(PHP, MySQL, Apache HTTP Server)

EDUCATION**Ort Braude College. Karmiel Israel**

1999 – 2003
